Advanced Services

You can extend your platform with add-on functionality from advanced services. The following advanced services are available for VCF and vSphere Foundation.

Add-Ons	Supported Platform Types	Description
Advanced Cyber Compliance	• VCF	Accelerate innovation in your private cloud with a robust catalog of ready-to-deploy solutions to extend capabilities and address business needs. Advanced Cyber Compliance builds upon core VCF deployments to deliver the following outcomes: • Continuous compliance enforcement at scale • Automated ransomware and data recovery • Enhanced platform security – Confidential computing – Virtual Private Cloud (VPC) policy-based connectivity
Protection and Recovery	• vSphere Foundation For VCF, protection and recovery is a part of the Advanced Cyber Compliance SKU.	Use protection and recovery to build powerful cyber and data resiliency for VCF. It provides ransomware and disaster recovery in a unified management experience, accelerated recovery, and simplified consumption with flexible licensing across use cases and clouds. Protection and recovery for VCF Automation provides protection and recovery for regular and multi-tenant providers that want to replicate workload VMs between a pair of Supervisors, within two region quotas, in the same VCF Automation organization.
VMware Data Services Manager	VCF	Use VMware Data Services Manager to build enterprise-hardened data services through a purpose-built solution for VCF with high availability, performance, backup, and monitoring.
VMware® vDefend™	VCF	Use VMware vDefend for built-in zone and application microsegmentation, threat detection and response, lateral security, ransomware and APT protection, reduced attack surface, and zero trust enforcement across VCF environments.
VMware® Avi™ Load Balancer	• VCF • vSphere Foundation	VMware Avi Load Balancer is the industry's first and only software-defined platform deeply integrated with VCF private cloud, delivering local and global load balancing, Kubernetes ingress, web application, and API security and application analytics.
• VMware Tanzu® Platform • VMware Tanzu® Data Intelligence	• VCF • vSphere Foundation	• Use VMware Tanzu Platform to accelerate ideas to code and code to production by simplifying and integrating the processes and tools used by developers and IT operations. • VMware Tanzu Data to maximize your data with solutions built to store, process, query, and analyze critical data resources in real-time and at a massive scale.

Add-Ons	Supported Platform Types	Description
Network Observability	VCF	Network Observability by Broadcom extends the VCF management capabilities with end-to-end visibility into the network overlay, underlay, and applications hosted in a public or hybrid cloud. The solution provides actionable insights to automatically pinpoint problems, resulting in lower internal resource costs and faster issue resolution, quickly getting end-users back to revenue-producing activities.
